User Tips:

Searching for Images:
You can search for images by using the Quick Image Search or by Browse Image Libraries.

In **Quick Image Search**, use a keyword (product name, product number, or image content) to find an image. Please double-check spelling and use minimal keywords to find image.

To **Browse Image Libraries**, select a library folder icon and browse through library subcategories. All images related to category will appear to right.

For more information about image specifications and download instructions, please email us at (webmaster@lazerinc.com)

Image Size Options:
Select **Low-Resolution** images for Microsoft® PowerPoint® presentations, Microsoft® Word® documents or the web. Please do not select high-resolution for these applications. High resolution files will take up valuable space on your computer and slow your presentation. If you need a high-resolution file in the future, please come back to the Fine Art Image Library and order high-resolution image.

Select **High-Resolution** images for offset or high-end digital printing (typically used by graphic designers for
catalogs, advertisements, brochures, sell sheets and tradeshow graphics)
Designers please note: JPG images are formatted for RGB color. Files will need to be converted from RGB to CMYK in order to display correctly in printed documents.

Select **Line Art** for logos and line art illustrations. Only select low-resolution if you need to use image in Word or Powerpoint.

For specific artwork needs not served by our online library, please email us at (webmaster@lazerinc.com)
